

<b>Model</b>	<b>MK12000</b>
Box Capacity	1,200 Bushels
Carrying Capacity	32 Tons

The MK12000 model gravity box from MK Martin is the ideal solution for those wanting to bring in their harvest with a single bin. With a rated capacity of 1200 bushels, the MK12000 Gravity Box eliminates the need to haul two smaller boxes in tandem a practice which is becoming increasingly scrutinized in some regions as safety concerns continue to increase on legal roadways.

To increase the handling characteristics and reduce stress during travel, the MK12000 rides on two sets of tandem suspension axles. To improve turning the front tandem axle features quad steer.

The box directs material to the hydraulically controlled center dump doors. Independently controlled the doors can be opened to optimize material flow to the elevator or storage facility.
