TRACK GROOMER

The **Track Groomer** mounts to your 3-point hitch and provides an easy and economical way to maintain and redistribute material within your riding arena.

The **Track Groomer's** simple mechanical operation uses angled tines to propel the hoop in a circular motion, allowing you to mix sand or any other material into your riding bed.

With no controls required for operation, operators can focus their attention on the position of the hoop allowing them to come within inches of walls or fences. This helps to ensure material built up around the sides are reclaimed and redistributed into the arena. This almost eliminates the need for manual shoveling of material around your arena.

Use the **Track Groomer** to provide sure footing that's easy on the hooves.

Model	Size	Weight (LBS.)
TG 5	5'	200
TG 6	6'	275
TG 7	7'	300
TG 8	8'	325

This easy to use tool will allow you to condition indoor or outdoor track surfaces that have been packed or compressed by heavy traffic or natural elements such as heavy rains, to restore your riding surfaces in a single pass.

The **Track Curry** uses a three step process that begins with two rows of heavy duty S-tines to fracture compacted track beds by cultivating the ground. Followed by an adjustable leveling bar to redistribute and smooth out the freshly cultivated materials. An adjustable 12" wheel finishes the job by packing the surface to the ideal density and applying a subtle texture.

The MK Martin **Track Curry** will condition your arena or track to the footing most suited to the health and safety of your horses.

Model	TC-5	TC-6	TC-7	TC-8
Working Width	5'	6'	7'	8'
Number of Shanks	13	15	17	19
Shank Size	1-1/4" x 1/2 x 22"
